1. Public Conference Website

Main navigation:

Home
About PACE
Conference Themes
Call for Papers
Important Dates
Registration
Committees
Publication
Sponsorship
Venue
Jaipur
Contact

The homepage should prominently show:

PACE-2027
Pioneering Advancements in Civil Engineering
29–30 January 2027
Poornima University, Jaipur
Countdown
Register Now
Submit Paper
Important deadlines
Conference themes
Key committee members
Publication information

The brochure says the conference is intended to bring together scientists, technocrats, scholars and young researchers, with emphasis on sustainability, resilience and data-driven solutions.

2. Real Registration System

This is probably the most important part of your project.

Instead of simply displaying:

UG/PG Student – ₹1,500

the user should actually be able to register.

The brochure currently defines:

Participant	Regular	Late
Indian UG/PG Student	₹1,500	₹2,000
Indian Research Scholar/Academician	₹2,000	₹2,500
Indian Industry Delegate	₹2,500	₹3,000
Foreign UG/PG Student	$100	$150
Foreign Research Scholar/Academician	$150	$200
Foreign Industry Delegate	$200	$250

These are directly from the supplied brochure.

Registration form

I would make it a multi-step form:

Step 1 – Participant

Country
Participant Category
Title
Full Name
Email
Mobile
Gender
Institution/Organization
Designation
Department
City
State
Country

Step 2 – Paper Information

Are you submitting a paper?
    Yes / No

Paper ID
Paper Title
Track
Author Type
Number of Authors

Step 3 – Accommodation

Require accommodation?
    Yes / No

Arrival Date
Departure Date
Number of Nights

The brochure specifically says paid accommodation will be available at the university and nearby hotels/guest houses.

Step 4 – Payment

The system calculates automatically:

Participant Type
        ↓
Country
        ↓
Registration Category
        ↓
Current Date
        ↓
Regular / Late Fee
        ↓
Final Amount

For example:

Indian
Research Scholar
       ↓
₹2,000

Before/after the applicable deadline, the amount changes automatically.

3. Payment Verification

This is where I would improve the current website significantly.

The brochure currently provides bank/remittance information and asks participants to share the transaction reference with the conference secretariat.

Instead of forcing users to email manually, your website can have:

Registration ID: PACE27-001245

Amount: ₹2,000

Payment Method:
○ Bank Transfer
○ UPI
○ Online Payment

Transaction ID / UTR:
[_____]

Payment Screenshot:
[Upload]

[Submit Registration]

Then the participant receives:

Registration Submitted Successfully

Registration ID: PACE27-001245

Payment Status: Pending Verification

4. Paper Submission System

This should be a completely separate workflow.

The brochure specifies:

Papers must follow the author-guideline format.
Maximum manuscript length is 10 pages.
Similarity should not exceed 10%.
Manuscripts should use the template shared by email.
Accepted and presented papers are proposed for ISBN conference proceedings.
Selected papers may be recommended for Scopus/Web of Science indexed journals, subject to the respective journal's review/publication policies.
Paper submission form
Paper Submission

Author Email
Paper Title
Track

Corresponding Author

Authors
  ├── Author 1
  ├── Author 2
  ├── Author 3
  └── Add Author +

Institution

Abstract
Keywords

Paper File
[Upload PDF]

Similarity Report
[Upload PDF]

[Submit Paper]

After submission:

Paper ID
PACE27-P00482

Status
● Submitted
5. Paper Status Tracking

This would make the website much more professional.

Participants should be able to log in and see:

My Submissions

PACE27-P00482

Title:
AI-Based Flood Prediction for Urban Infrastructure

Status:
Submitted

Timeline

✓ Paper Submitted
✓ Under Review
○ Acceptance Decision
○ Registration

○ Camera Ready
○ Presentation

The official deadlines currently listed are:

Abstract: 15 September 2026
Paper Submission: 15 October 2026
Acceptance Notification: 15 November 2026
Registration: 15 December 2026
Camera Ready Paper: 28 December 2026

That timeline should be visible throughout the system.

6. Admin Dashboard

This is the part I strongly recommend you add.

The Civil Department should not have to manage everything through Excel/email.

Create:

/admin
Dashboard
PACE-2027 ADMIN

842
Registrations

417
Papers

356
Payments

61
Pending Review

Then:

Registrations

ID	Name	Category	Amount	Payment
P27-001	Rahul Sharma	Researcher	₹2000	Verified
P27-002	John Smith	Foreign	$150	Pending
P27-003	Priya Singh	Student	₹1500	Verified

Admin actions:

View
Edit

Verify Payment
Reject
Download
Email
Export CSV
7. Paper Review Dashboard

For the technical committee:

Paper ID	Title	Track	Status
P27-001	Smart Structures	Structural	Pending
P27-002	Flood Prediction	Water	Review
P27-003	Green Concrete	Environment	Accepted

Reviewer can open:

Paper Details

Title
Authors
Institution
Abstract
Keywords

[Download Paper]

Reviewer Comments
[_____]

Decision:

○ Accept
○ Minor Revision
○ Major Revision
○ Reject

[Submit Decision]
8. Automatic Email System

This will save the department a huge amount of manual work.

Automatically send emails for:

Registration
Registration Received
Payment Verified
Payment Rejected
Registration Confirmed
Paper
Paper Submitted
Paper Under Review
Revision Required
Paper Accepted
Paper Rejected
Camera Ready Required

Conference
Conference Reminder
Registration Deadline
Camera Ready Deadline
Conference Starting Tomorrow
9. Unique IDs

Every participant/paper should get a unique ID.

For example:

Registration:
PACE27-R00001

Paper:
PACE27-P00001

Payment:
PACE27-T00001

This makes administration much easier.

10. Certificate System

You can even add this later.

After the conference:

Certificate Verification

Enter Certificate ID

[PACE27-C-001245]

[Verify]

Then:

Certificate of Participation

This is to certify that

MANOMYA MARWAL

has participated in

PACE-2027
Pioneering Advancements in Civil Engineering

29–30 January 2027
Poornima University, Jaipur

And the admin can generate certificates in bulk.

11. Database Design

I would structure the backend approximately like this:

```
users
  ├── id
  ├── name
  ├── email
  ├── password
  └── role

registrations
  ├── registration_id
  ├── user_id
  ├── country
  ├── category
  ├── institution
  ├── designation
  ├── amount
  ├── payment_status
  ├── accommodation_required
  └── created_at

papers
  ├── paper_id
  ├── registration_id
  ├── title
  ├── abstract
  ├── track
  ├── status
  ├── paper_file
  └── submitted_at

authors
  ├── id
  ├── paper_id
  ├── name
  ├── email
  ├── institution
  └── designation

payments
  ├── id
  ├── registration_id
  ├── amount
  ├── transaction_id
  ├── screenshot
  ├── status
  └── verified_by

reviews
  ├── id
  ├── paper_id
  ├── reviewer_id
  ├── comments
```

```
  ├── decision
  └── reviewed_at

certificates
  ├── id
  ├── registration_id
  ├── certificate_id
  └── file_url
```

12. Recommended Technology

Since you already have a frontend prototype, I would not continue building this as one giant HTML file.

I recommend:

Frontend
Next.js
React
Tailwind CSS

Backend
Next.js API / Node.js

Database
PostgreSQL

Authentication
Auth.js / Supabase Auth

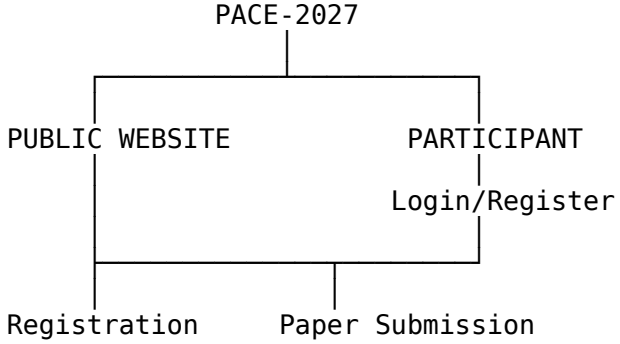
File Storage
S3 / Supabase Storage

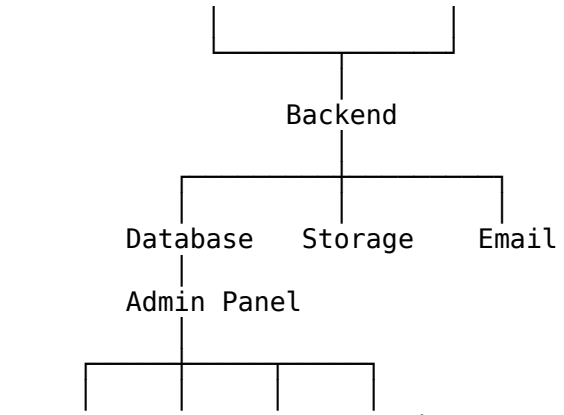
Email
Resend / SMTP

Payment
Payment gateway + manual UTR verification

Admin
Next.js Admin Dashboard

Architecture:





Most important observation about your current website

Your existing design is actually a good starting point. It already has the PACE branding, homepage, countdown, conference information, themes, committees, registration fee table, payment information, venue and other sections.

But currently it is essentially:

Website → Information

You need to turn it into:

Website → Registration → Payment → Paper Submission → Review → Acceptance → Camera Ready → Conference → Certificate

That's the real project.

And because the first deadline in the brochure is 15 September 2026 for abstracts, the registration/submission backend should be treated as a priority rather than building dozens of extra informational pages first.

I would build it in this order

Phase 1 — Foundation

Convert current HTML into Next.js
Clean up design/responsive UI
Add all brochure content
Registration UI
Paper submission UI

Phase 2 — Backend
6. Database
7. Authentication
8. Registration API
9. Paper upload API
10. Payment/UTR verification

Phase 3 — Admin
11. Admin dashboard
12. Registration management
13. Paper management
14. Reviewer system
15. Email notifications

Phase 4 — Conference
16. Acceptance letters
17. Camera-ready submission

18. Certificate generation
19. Certificate verification
20. Analytics/export
